Design Fix/Suggestions

Home Page

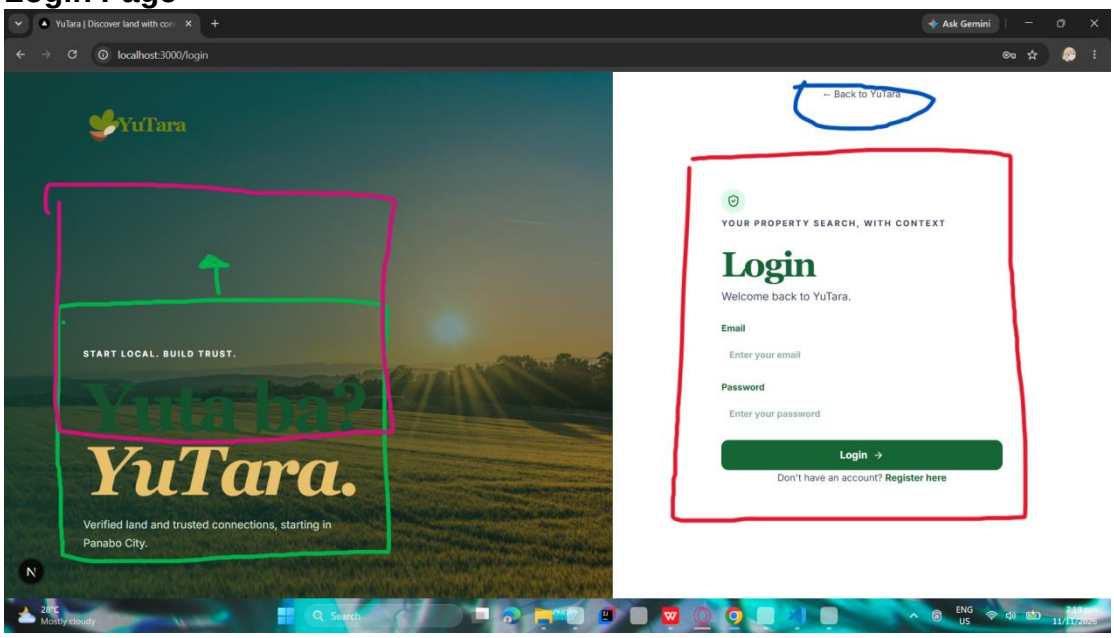

At the attached photo we can see the home page.

- Red marker indicate the Logo and the title. The Logo already had the title, thus the title is not needed.
- Yellow Marker - the navigation bar, it doesn't have any problems for now but remember it I will say why I mark it later.
- Blue marker - The Login is white while the Get Started is green, it should be Login Green (To call the attention of the user0, the Get started be removed.
- Violet marker - The header should be transparent. Take the picture below as a guide on what I said about the header being transparent and make the photo be the whole background.

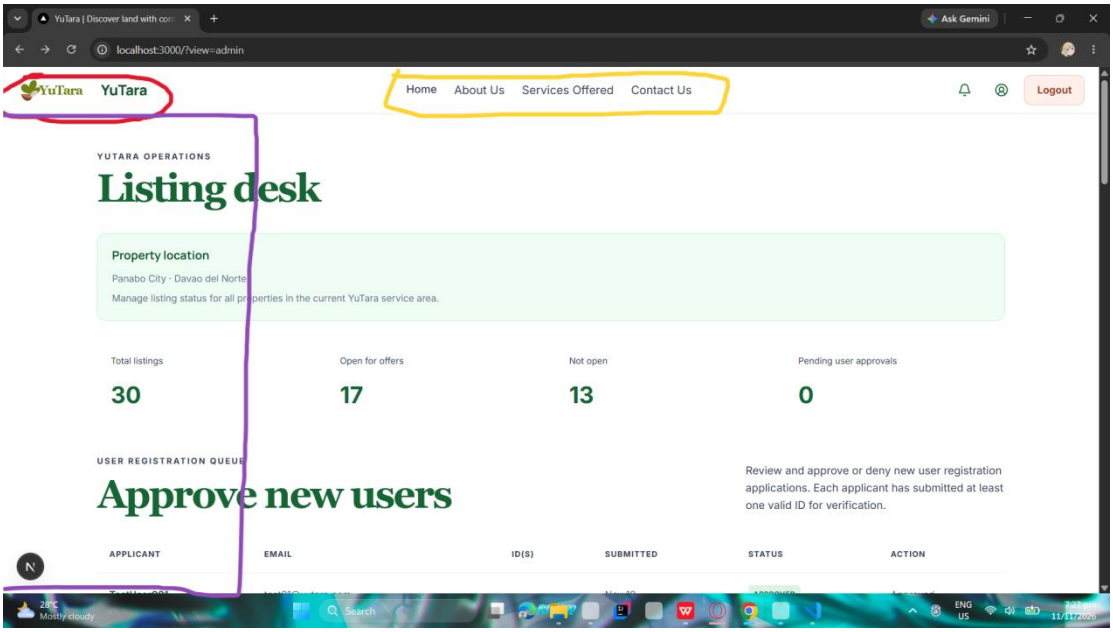

- Green Marker - move this to Pink maker . I want it to be on the left side.
- Pink marker - where the green marker should move.
- Black marker - the Learn more is hard to see.

Login Page

- Red marker - It's too white, I cant see the place holder.
- Blue marker - Move this to the left
- Green - move this up to the pink marker
- Pink maker - where the green marker will be moved.
- Additionally there is no forgot password.

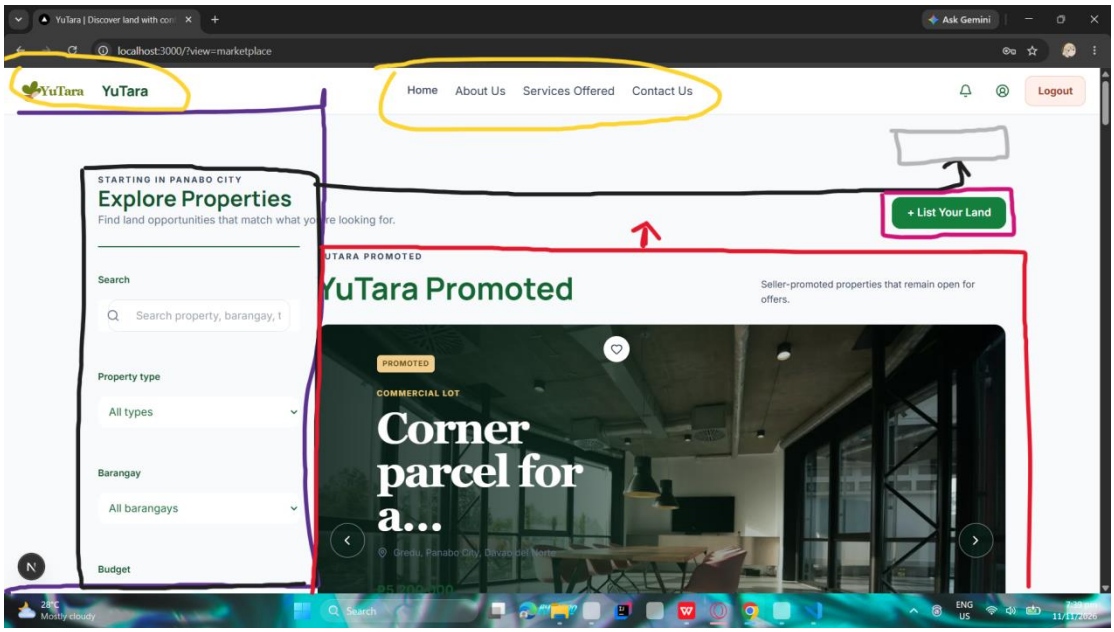

Admin Panel

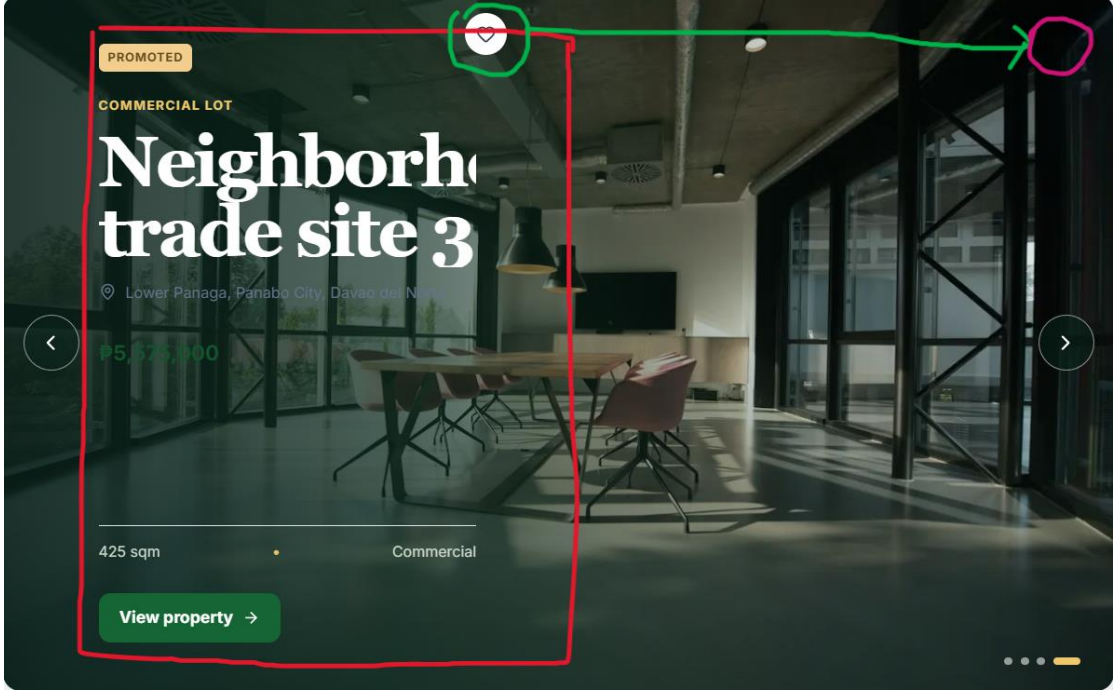

- Red marker - The same problem with logo

- Yellow marker - the navigation bar still had the home page navigation.It should be remove.
- Violet marker - here should be the navigation pane specifically for admin to navigate, maintain, approve, and receive feedbacks, Manage promoted lands, etc.
- In the admin setting there shouldn't be [My Dashboard] The admin isn't buying or selling. It monitors, maintain, and receive data that's all.

User Panel

- Yellow marker - the previous concerns
- Violet marker - this should be the area of the navigation pane, all navigation pane list should be visible and fited in this area to avoid needing to scroll to see other navigation botton.
- Black marker - to search land it should be move to an entirely different way, first it should be [Search land and be move to grey marker. Once gray marker is clicked the options on how to search a land will pop up, once the user click search the marketplace will be refreshed. Promoted land excluded.
- Gray marker - where the search button should be move
- Pink marker - The left navigation pane should have the option of [Sell land] so this process will be redundant in one screen thus this should be phased out.
- Red marker - move the promoted land up so we can se the promoted land as a whole.

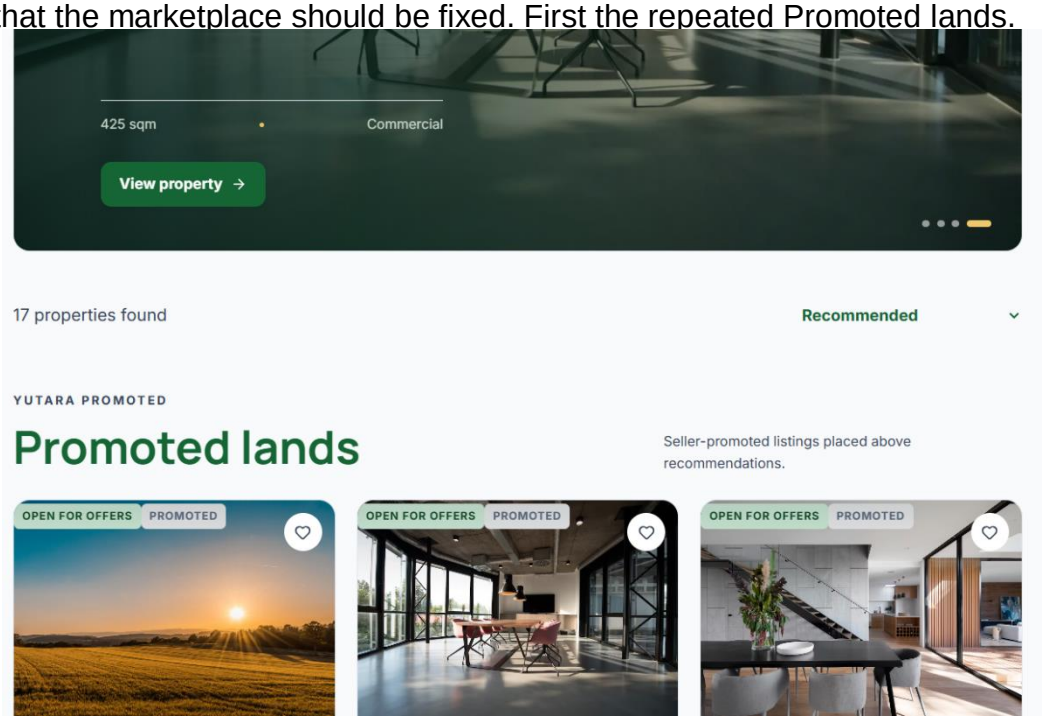

The Promoted land card (Specifically)

- Red marker -there is multiple fixes here. The space is not utilized properly the text are cut offed and the smaller text are hard to read.
  - First the title of the land or how the seller describe the land should be readable as a whole, if the seller put a lot of worlds that's where you could cut the last letter off.
  - Second the smaller letters are harder to read. The location and price should be white or black depending on the background image the seller provided so that it's easy to read (remember our target market is those in 30s up so their eye sight might be a problem).
- Green marker -The save land button should be move to the right (This is for the promoted land carosel only other cards are fine), in the pink marker.
- Pink marker - where the save button should be moved.

Marketplace (As a whole)

Given the suggested changed and fix on the latter stage I should emphasize that the marketplace should be fixed. First the repeated Promoted lands.

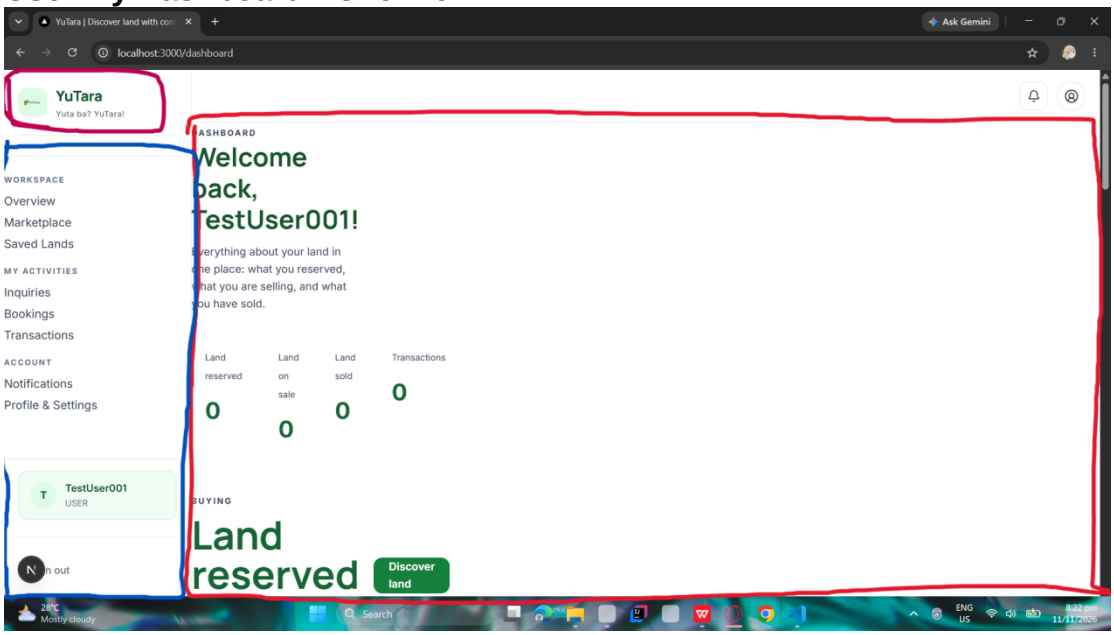

Given the picture provided above the promoted land carosel is just above the Promoted lands. It's redundant. So the second promoted land should be removed.

After the promoted land is the affordable options, the user didn't even use the search yet so there shouldn't be affordable options that shows within my budget.

After the affordable options is properties near your barangay, again the user didn't use the search yet.

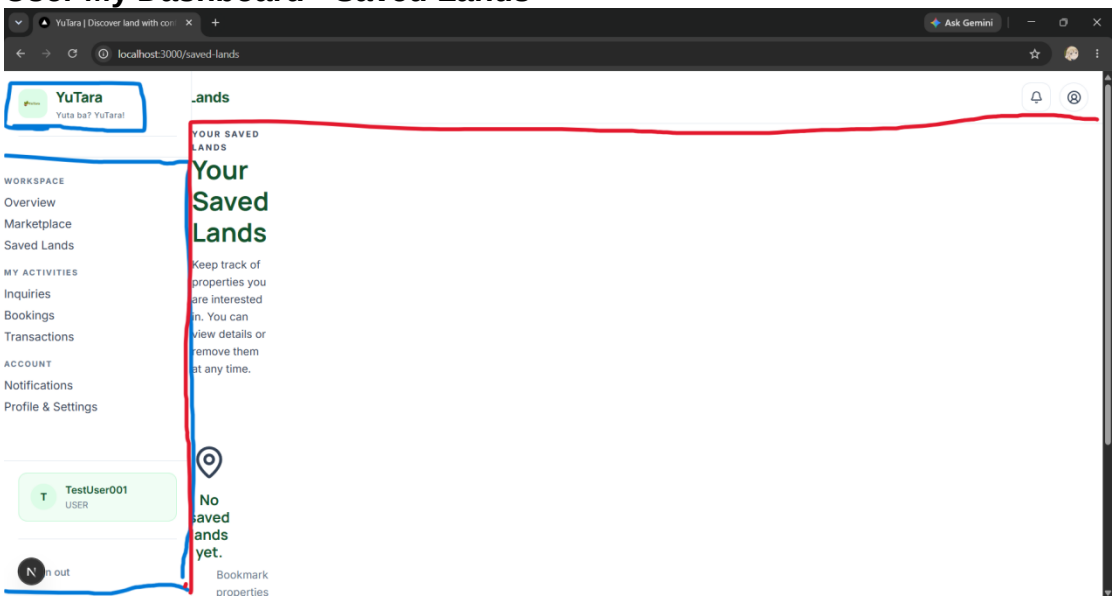

This two shouldn't show up at the start, means right after the Promoted lands is All land for sale right away. Those only shows up when the user search it specifically. I said specifically because the users can search land base on near them or price range. So either of those option will correspond to the appropriate options.

User My Dashboard - Overview

- Red mark - as you can see the interface it's own is not properly arranged and properly spaced out. It needs to be properly arranged. The overview contains Land Reserve, Land on Sale, and Land Sold. This three should be properly arranged.
- Maron mark - The Logo and title clas. Like I said the logo had a title already.
- Blue mark - The left navigation pane for my dashbord is alright but need a bit of spacing and a padding in the left border.

User My Dashboard - Saved Lands

- Red mark - the same problem with overvie it's not properly arranged.
- Blue mark - the same problem as the overview.

User My Dashboard - Inquiries, Bookings, Transactions, Profile and settings.

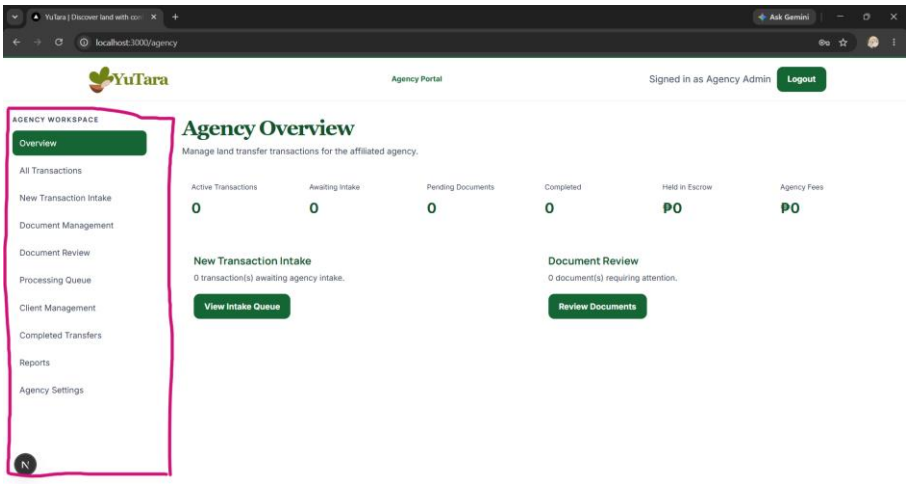

I don't need another picture to say that the previous pictures provided (Overview and Saved Lands) already had enough information to say that this problem does happen all over the My Dashboard of the user.

Notice I didn't include Marketplace and Notifications.

First the Marketplace works fine.

Second is that the Notification throws 404 error. Meaning the page is not found. But the notification of icon on the Marketplace works fine. Meaning the notification of the Marketplace button and the notifications of the My Dashboard doesn't have connection.

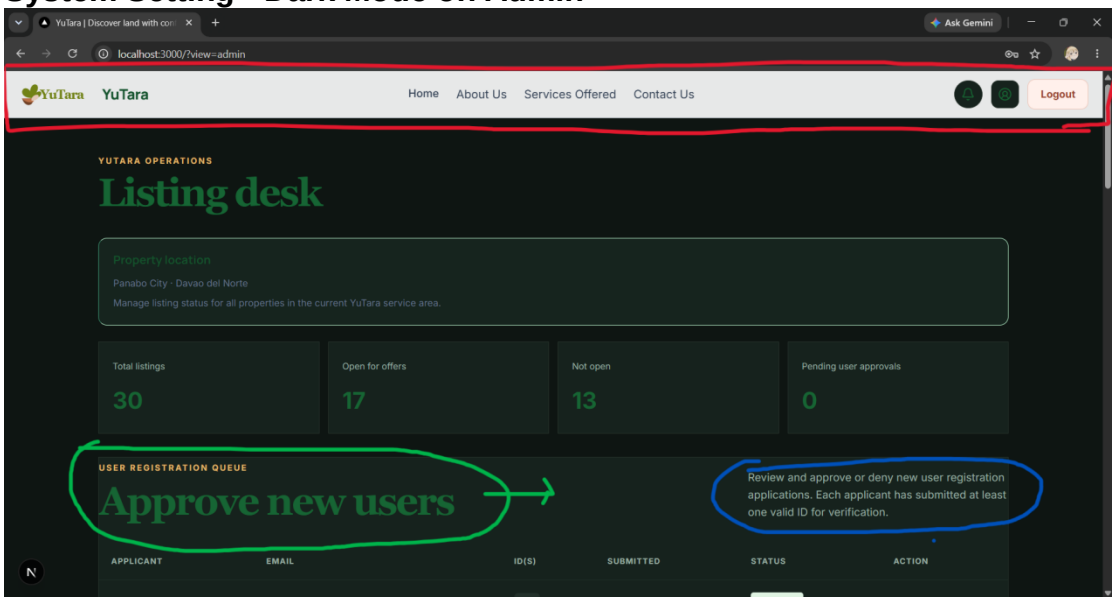

Agency Panel

- Pink marker - The left navigation pane doesn't really work. I don't know if it had a function or what.

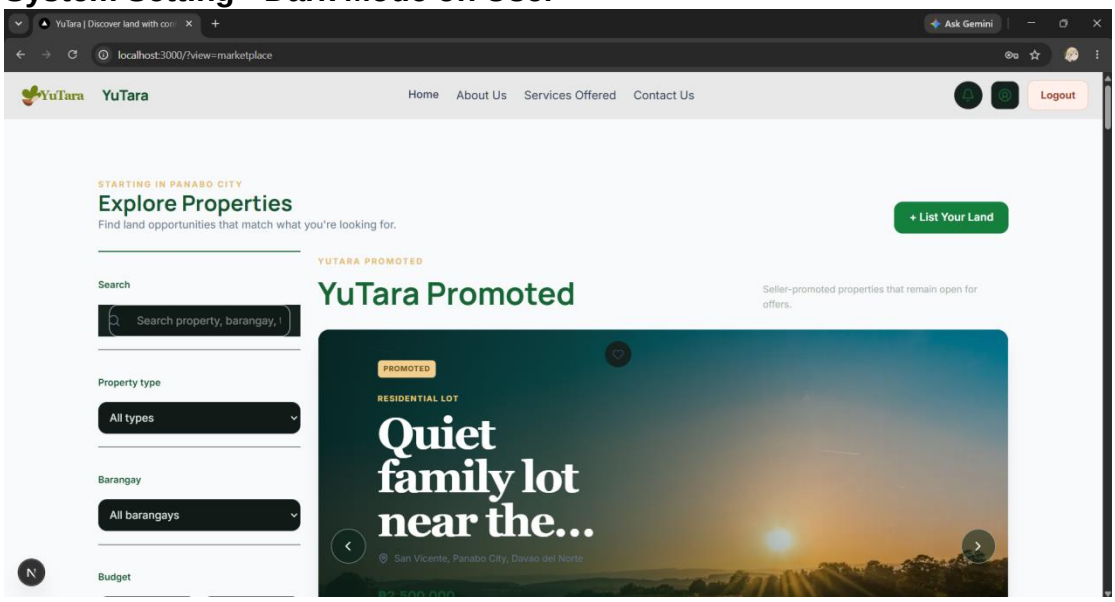

Relatively the agency doesn't have a problem (for now).

System Setting - Dark Mode on Admin

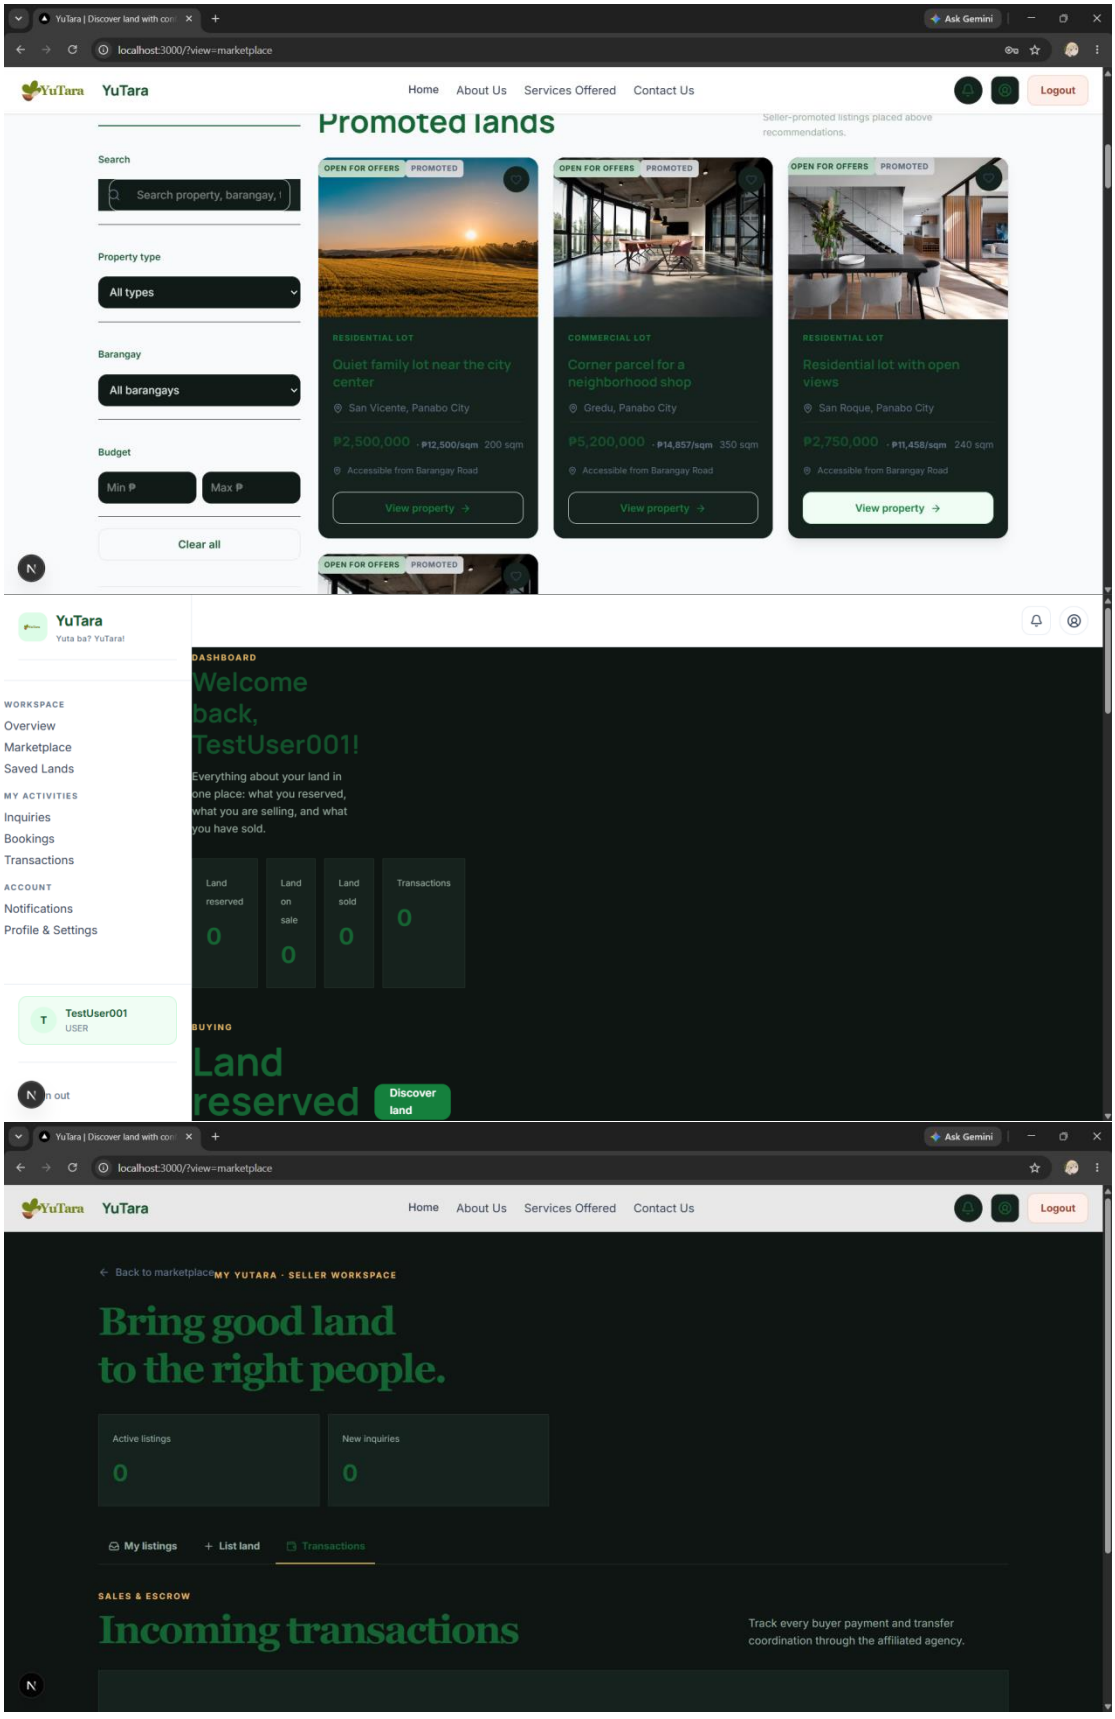

- Red market - The rest turned dark but the uper header doesn't.
- Green marker - To close to the left. Move it to the right a little bit.
- Blue marker - Remove description.

System Setting - Dark Mode on User

I mean the picture speaks on itself. It's turned to dark mode. But the rest still stay at the light mode.

Here's the rest of the pictures.

All the pictures proves something.

That’s all on this manual test. Additonal note.

Fix the issue on the notification on the My Dashboard. The system is confused on what notication it’s calling once I click the notification element not the one in the left navigation pane.
